Description

The 4-1/2 in. (114 mm) dial size SWICHGAGE® is a mechanical gage for pressure indication. It includes 2 adjustable SPDT switches. These snap-acting switches can be used for start and stop, to trip alarms and to shut down equipment. Ranges are available from 30" vac (-100 kPa) [-1 bar] thru 20,000 psi (138 MPa) [1379 bar].

Basic Operation

This highly reliable gage features a bourdon tube sensing mechanism. Pressure against the bourdon tube translates into a mechanical gage reading. The gage pointer acts as a pressure indicator. The pointer movement is stopped when it meets the trip point indicator. The bourdon tube continues to travel slightly and the snap-switch trips.

Applications

Murphy 45PE Series models are widely used in electric motor applications due to their 250 VAC pilot duty rating. These models can also be used to monitor gas compressor pressure, pumping applications and industrial process applications.
